Sustainability

We know that you care for the planet just as much as we do. We offer engineered flooring that is made of wood exclusively from certified forestry operations.

Unfading Quality

Experience timeless elegance with our wooden flooring—unfading quality that stands the test of time, transforming your space with enduring beauty.

Health

We take care to source our finished floors only from reliable manufacturers who have the necessary certifications in this regard.

Our Commitment to the environment

Our commitment to the environment stretches beyond words. Our care for the environment had its genesis in our first days back in 2000. Ever since then, we have been scanning the globe to procure the best products, not only for you but for the environment as well.

In our process to decide what kind of products we bring you, our first criterion is always how the company is procuring their wood. It is very easy to find options of woods that come from non-sustainable forests, but careful research and due diligence are required to find the real manufacturers who share our love for Mother Earth.

We bring you the products from these places to sustain the positive practice of sustainable farming, and so that you, as a customer, know that you are doing your part in keeping the planet healthy.

About our laminate floors

Get the look of real wood flooring at less than half the cost. Laminate floors are extremely durable and easy to maintain, making them a great choice for busy homes with pets or kids.

Airy Light Tones

Lighter-tone wooden flooring can have a significant impact on interior design. It can make a space feel more open and bright and can create a modern and sleek aesthetic.

Lighter-coloured wood can also complement various design styles, from Scandinavian to mid-century modern. Additionally, lighter wood floors can highlight other interior design elements, such as furniture or artwork. Lighter wooden flooring can be an excellent choice for creating a fresh and inviting interior space.

The Word on the Street...

—— “ ——

Had a wonderful experience with Span Floors. We recently had our house built and got the wooden flooring and facade wood from Span Floors. We were really impressed by the product range, staff, product quality and the services we got from the team. Our whole experience was very smooth and would definitely recommend their services.

God is in the details!

We all have bright ideas, but sometimes we need help executing them; that's where we come in! With our excellence in this field, we are able to provide top-class finishing fulfilling all your accenting needs. If you have a particular requirement, please let us know, and we can help you make it come to life.

White, Grey, and Black Tones

White, grey, and black tones of wooden flooring can have a significant impact on the overall look and feel of an interior space.

White tones give a bright and crisp feel, making a space appear larger and more open. Grey tones create a calming and sophisticated atmosphere, while black tones provide a bold and dramatic statement.

The choice of tone depends on the desired style and ambience of the room. It is essential to consider other elements of the space, such as wall colour and furniture when selecting the tone of wooden flooring to ensure a cohesive and harmonious design.

Medium Natural Tones

Medium natural tones of wooden flooring bring a warm and inviting touch to any interior space.

The natural tones and grains of the wood create a sense of comfort and calmness while also adding texture and depth to the room.

This type of flooring is versatile and can complement a variety of design styles, from modern to traditional. These tones make an excellent choice for creating warm and comfortable spaces.

Earthy Brown Tones

Using earthy brown tones of wooden flooring can create a regal and elegant atmosphere in any interior.

The natural beauty of wood adds character and texture to a space, making it feel cosy and grounded. Earthy brown tones can also complement a wide range of colour schemes and design styles, from rustic to modern.

These darker tones make an excellent choice for creating an elegant and sophisticated space.

Get to Know Your Span Floor

The Span Floors Laminate flooring collection comes with top-of-the-line technical specs for successful day-to-day and long-term usage. At the same time, it will be good to know some key things that will help you make a sound decision as well as get the best out of your investment should you choose to go ahead. Read on below for further information

Continued....

Scratch Resistant

Our laminate floors are finished using high-quality lacquers or hardwax oils, depending on the collection. Generally, lacquered coatings are more scratch-resistant than hardwax oils. At the same time, scratches on hardwax oils are easier to repair. Speak to your Span floors specialist for a recommendation based on your particular needs and lifestyle.

Water Resistant

The high-quality structure in all our floors is strong enough to handle the routine moisture fluctuations found in the air as well as an occasional accidental drink spill. Just wipe off the spill immediately. At the same time, flooding of the flooring or continued seepage of moisture from any source may cause damage to a part or the whole of the floor. In such an event, a few or all of the flooring planks may need to be replaced or sanded and recoated, depending on the situation.

Sound Dampening

World class underlays tremendously affect both in-room as well as below-room acoustics. Using an appropriate underlay such as Elastilon (a layer of thin matt laid under the flooring) can improve the quality of sound tremendously while walking on it with hard heels.

Easy Installation

Our floors come pre-edged with a T & G profile or a click profile for easy installation. You could even take your floor along when you move and refit, depending on the type of installation.

Relative Humidity

Relative humidity or RH is the amount of moisture present in the room air at any given time. This keeps fluctuating during the day and seasonally. Any wood-based material reacts to these changes. You may have noticed that your wooden doors and windows jam a bit during monsoons. This is humidity at work. Similarly, such changes may cause your engineered wood flooring to expand or contract, leading to some creaking noises or gaps between plank joints typically associated with wood floors. While proper installation is helpful in avoiding these to a large extent, sometimes the humidity fluctuations are too large. Keeping the in-room humidity by using air conditioning helps, particularly during monsoons. Similarly, when the air is too dry, some humidification helps. Speak to our teams for some easy tips on how to do this.

Hygienic

The surfaces of our engineered floors are coated with suitable finishes. That makes them hypoallergenic (hypo = low) for most people. Day-to-day cleaning using appropriate cleaners, which are easily available in stock with us, is generally enough to maintain a high level of cleanliness.

Easy Cleaning

Use a broom or a vacuum cleaner followed by a well-wrung mop, if needed, to take care of the routine cleaning. No special equipment is needed. The use of our recommended cleaning solutions added to fresh water used for mopping will keep your floors in good shape. Our technical and sales team are well-trained to guide you on the appropriate step.

Impact Resistance

Engineered floors are real wood floors. Hence they can be dented somewhat depending on the intensity of the impact. These floors are not fragile though and can mostly take the knocks from day to day life. However high heels particularly not in good repair may cause dents over a period of time. Depending on the thickness of the top layer of your engineered wood floor, it may be possible to renew the entire flooring to a new like condition after many years of usage

More on Floor Cleaning and Maintenance

Our special cleaners and cleaning kits enable you to clean and maintain your floors in a sweep. Ergonomic and simple to use, the floor cleaning kit is quick to assemble and refill with the specially developed engineered flooring cleaner. Just use the correct kind based on the finish on your Span engineered floor. Forget filling up a bucket and adding concentrate; just spray and clean!

Additionally, you may opt to buy just the Cleaning Concentrate and add the recommended quantity as mentioned on the bottles to the water bucket and use it for day-to-day mopping with a very well-wrung mop.

Daily Care

01 Dry Cleaning

02 Damp Cleaning

Vacuum cleaner or broom

Apply the cleaner to the mop and floor and clean the room
